

MODEL TESTING SNAPSHOTS: Ride Hailing Application Domain

Model Information:

What have you done?

You have trained a machine learning model to recognise when text is Positive_Praise, Negative_Complaint or Urgent_Support.

You created the model on Saturday, August 1, 2026 6:11 AM.

You have collected:

- 10 examples of Positive_Praise,
- 10 examples of Negative_Complaint,
- 10 examples of Urgent_Support

What's next?

Try testing the machine learning model below. Enter an example of text below, that you didn't include in the examples you used to train it. It will tell you what it recognises it as, and how confident it is in that.

If the computer seems to have learned to recognise things correctly, then you can go to Scratch and use what the computer has learned to make a game!

If the computer is getting too many things wrong, you might want to go back to the [Train](#) page and collect some more examples

Once you've done that, click on the button below to train a new machine learning model and see what difference the extra examples will make!

Try putting in some text to see how it is recognised based on your training.
